

ADJUST COPPER ULTRA

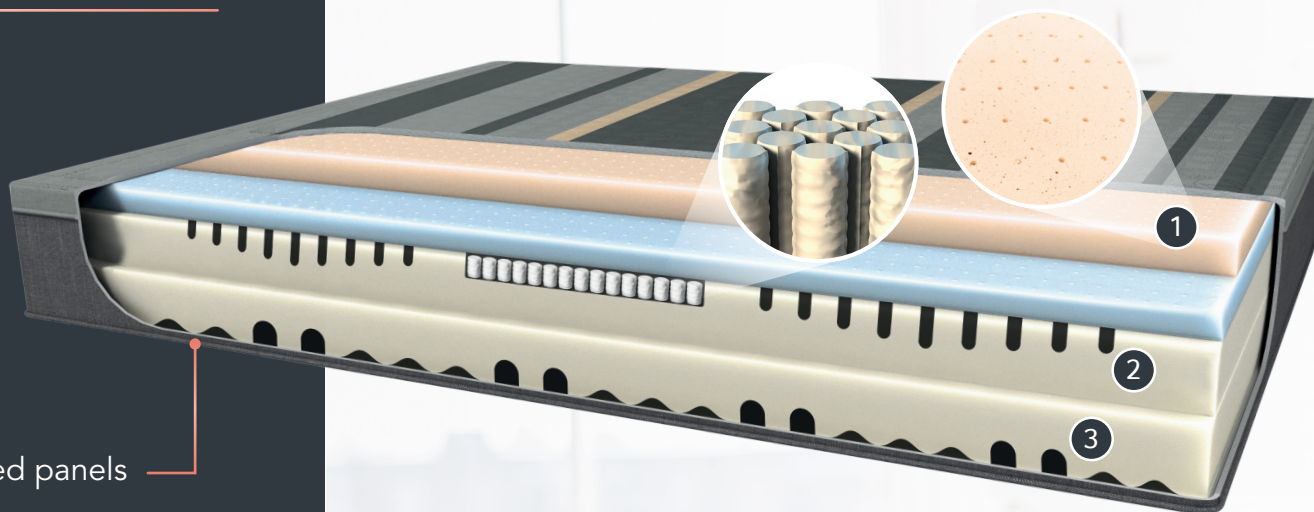

Mattress Height:
10.75 inches

Artfully stitched
& handcrafted panels

LAYERS'S COMPONENT

1. Copper Infused VX Foam (2")
2. VX Foam (1")
3. Expulse-Air Support Layer (3")
Micro-coils (0.75")
4. Adjust Foam Core (4.75")

1

DESIGNED FOR COMFORT:

VX is a unique foam that combines the relaxing comfort of memory foam with the support of high-density foam. It does not react to body heat or ambient air; the comfort remains constant all night in any season. When combined with our perforation techniques, the thousands of cells let air flow freely while keeping the body at an ideal temperature for a restful sleep.

Copper is known for benefits such as maintaining a cool, comfortable sleeping environment, it is dust mite resistant and it encourages brain regeneration during sleep. We have paired the benefits of copper to our proprietary VX foam.

2

DESIGNED TO OFFER PROPER SUPPORT:

The 14 ventilation channels positioned across the entire width of the middle layer of the mattress allows air to move freely and escape easily through the sides.

Micro coils are added to the center for a more precise focus on the lumbar region, they are individually pocketed for maximum motion isolation.

3

PERFECTLY CONFIGURED TO MATCH THE MOVEMENTS OF AN ADJUSTABLE BED:

The foam core has been developed by our sleep engineers to maximize the benefits of a mattress paired with an adjustable bed. Our wave design is created with horizontal channels to increase the flexibility of the foam core in order to work in synchronicity with the movements of the adjustable bed. It also has the added benefits of air flow.
